BEL 5150 WFPS

The BEL 5150 WFPS combines the functions of a semi-automatic case former and packing station with a semi-automatic top and bottom case sealer as single machine unit to make a complete case forming, packing and sealing system requiring only a single operator. The case former section folds the bottom flaps of RSC case blanks opened and presented down into it and then firmly holds the case ready for packing. As the filled [or empty] case is pushed out of the former into the combined case sealer, the former resets automatically ready to receive the next case blank. The BEL 5150 is electro-pneumatically operated and requires 120V single-phase electrical power together with compressed air at 80-90 psi. / 6 Bar.
