

S10 Packing Conveyor and Weigh Scale

The S10 Conveyor and Weigh Scale Station monitors the weight and/or count of product loaded into a corrugated case before the case has been sealed, allowing a chance to correct overages or shortages. It is designed to be positioned between the BEL 505 and either the BEL 150 or BEL 252. A load cell is mounted in a special roller conveyor section that becomes the scale platform. A GSE Programmable Control unit is provided with a mounting column and bracket that allows it to be located in a convenient location.
